## Product Overview

The TransTel AH99-PS (Paged) Single Line Telephone is ideally suited for both Hotel and Business applications. The AH99-PS features 8 programmable memory keys that can be custom configured for services in Lodging Applications like Operator, Front Desk, Concierge, Voice Mail and a variety of other services. In Business Applications these keys can represent access to features or they may store frequently dialed telephone numbers. The Hook Delay feature can prevent to hold a call in a PABX by accident.

UNIQUE to the TransTel AH99-PS single line telephone is its ability to receive a PAGE when connected to a TransTel Telephone System!

This capability allows customers to utilize cost effective single line telephone sets instead of more expensive digital telephones and costly paging systems and still be able to announce important messages on a system wide basis.

For example a Hotel, School or Nursing Home Administrator can initiate an All Call Page to announce an emergency evacuation. By utilizing the TransTel AH99-PS single line telephone, ALL guest rooms, classrooms and nursing home residents will hear the evacuation announcement. This drastically improves response times and effectiveness while saving costs at the same time.

The TransTel AH99-PS is an easy-to-operate and affordable single line telephone. It features handsfree capability, message waiting indication and is wall mountable.
